C is a procedural programming language. It was initially developed by Dennis Ritchie in the year 1972.

It was mainly developed as a system programming language to write an operating system.

The main features of the C language include low-level memory access, a simple set of keywords, and a clean style, these features make C language suitable for system programmings like an operating system or compiler development.

Many later languages have borrowed syntax/features directly or indirectly from the C language.

Like syntax of Java, PHP, JavaScript, and many other languages are mainly based on the C language.

C++ is nearly a superset of C language (Few programs may compile in C, but not in C++).
